

Test av cPanel Web Disk på bgresearch.no for Per Vidar

28.10.2025

:~))

Brukernavn: Per_Vidar@bgresearch.no

Passord: dhH2CgHryh

cPanel er en mye brukt Linux basert "Web Host". cPanel gir brukere av webhotell mange muligheter til å administrere fillagring, epost, programvare, sikkerhet, databaser, domener etc. på sitt webhotell. Dette kan bare gjøres av administrator.

Administrator kan opprette Web Disk brukere som kun har tilgang til filer og mapper i et begrenset område. Tilgang til Web Disk området gjøres fra de vanlige filklientprogrammene i IOS, Windows, Linux eller Android. Andre program (som Word, Excel, mm.) krever spesielle oppsett for å lese/lagre direkte i Web Disk.

TEST

- 1) Setter opp brukernavn, passord og filmappe i cPanel (fig 1)
- 2) Laster ned fil "bgresearch.no Secure WebDisk.vbs" fra cPanel (fig 2)
- 3) Dobbeltklikker *.vbs fila i Windows 10
- 4) Mappen "bgresearch.no@SSL@2078" er nå tilgjengelig i Windows 10 File Explorer som en nettverksmappe (fig 3)
- 5) Samme filer og mapper er også tilgjengelig for cPanel administrator via "File Manager" i cPanel via nettleser (fig 5), men all filhåndtering kan også gjøres på vanlig måte i Windows som "Klipp og lim", "Dra og slipp" etc.

★ AI-oversikt

You can share files with family using cPanel's **Web Disk** feature or by creating an **FTP account**. Web Disk allows you to mount a directory on their computer as a drive, while an FTP account is a more traditional method for accessing files. 

Method 1: Use Web Disk

This is a great option because it gives your family easy access to files as if they were on their local computer. 

1. **Log in to cPanel** and go to the "Files" section.
2. Click on **Web Disk**.
3. Click **Create Account**.
4. Enter a username, password, and the domain.
5. Select a directory inside your home directory that you want to share (e.g., `public_html/shared_photos`).
6. Set the permissions to **read-write** if they need to upload, or **read-only** if they only need to download.
7. Click **Create**.
8. Provide your family with the credentials (username, password, and the server address provided by your host) so they can connect their device to this Web Disk account.

◆ AI-oversikt

cPanel is a popular web hosting control panel that provides a user-friendly graphical interface for managing a website and hosting account through a web browser. It simplifies complex tasks like managing files, setting up email accounts, creating databases, and monitoring site performance, all from a central dashboard. 

- **Simplified management:** cPanel eliminates the need for complex command-line interactions, making it accessible for both beginners and experienced users.
- **Key features:** It includes tools for file management, email configuration, database creation, and one-click installations of applications like WordPress.
- **Security:** cPanel offers security features such as SSL/TLS certificate management and IP blocking to help protect a website.
- **Server administration:** While cPanel is primarily for managing a single hosting account, there is also a related product, cPanel & WHM, that allows for the administration of an entire server.
- **Operating system:** cPanel is a Linux-based control panel, commonly used with Linux servers for their speed and stability.
